Molishka Sahu

Full-Stack Web Developer | AI Tooling Developer

molishkasahu@gmail.com | github.com/molishkasahu01 | molishkasahu.onrender.com | Greater Noida, Uttar Pradesh

Professional Summary

B.Tech CSE (AI) student at NIET Greater Noida experienced in full-stack web development, automated data pipelines, and AI tooling. Built projects including **Atlas Engine**, **Influencer Outreach Engine**, **TriageDesk**, **AgentGuard**, **Sandbox**, and proposed **NeuroTrace**. Proficient in Python, TypeScript, React, FastAPI, and relational databases with a focus on verification, automated testing, and reliable web systems.

Skills

Programming: C, Python, TypeScript, JavaScript, HTML5, CSS3, SQL

Libraries/Frameworks: React, FastAPI, Tailwind CSS, Vite, Scrapy, Streamlit, SQLModel, Pydantic, BeautifulSoup

Tools: Git, GitHub, VS Code, Linux, Docker, Playwright, Automated Testing, REST APIs

Databases: PostgreSQL, SQLite, Relational Schema Design

Soft Skills: Time Management, Leadership, Critical Thinking, Decision Making, Technical Documentation

Projects

Atlas Engine | Python, FastAPI, Scrapy, React, Tailwind CSS, SQLite [Live | GitHub] Nov 2026

- Built a 7-stage automated scholarship discovery and verification engine across **22+ official sources**, persisting **24 records** and **149 field-level evidence snippets** in SQLite.
- Implemented a deterministic **0–100% confidence scoring** pipeline (≥95% verified threshold) with DNS/TLD validation, differential change tracking, and **10/10 passing unit tests**.

Influencer Outreach Engine | React, Vite, JavaScript, Gemini API [GitHub] Nov 2026

- Developed a live-research workspace using **Gemini Google Search grounding** to discover creators, score fit signals (relevance, engagement, accessibility, conversion), and draft outreach sequences.
- Engineered a server-side Vite middleware proxy (/api/gemini) keeping API credentials isolated from the client bundle.

TriageDesk | React, TypeScript, FastAPI, PostgreSQL, SQLModel [GitHub] Oct 2026 – Nov 2026

- Extended the Full Stack FastAPI Template into a customer-support ticketing application with ticket creation, priority queuing, and multi-state status tracking.
- Implemented **role-based permissions (RBAC)** separating customer and support-agent workflows alongside organized conversation threads and audit activity history.

AgentGuard | Python, Sandboxed Execution, Automated Testing Oct 2026

- Designed an isolated code-execution and verification layer for agentic AI systems and coding assistants to validate code changes prior to merge or deployment.
- Executes isolated test suites to identify syntax and runtime failures while keeping validation separated from main application data.

Sandbox | Python, Go, Docker, REST API [GitHub] Oct 2026

- Explored container-based sandbox runtimes (Docker) for safely executing AI-generated Python code and shell commands in isolated environments.
- Evaluated REST API and Python/Go SDK workflows supporting configurable full-agency and limited-agency command permissions.

NeuroTrace | LLM Monitoring & Evaluation Proposed

- Proposed an observability and evaluation platform to detect and log hallucinations, unsupported claims, and inconsistent reasoning in LLM responses.
- Scoped automated checks for instruction-following failures and prompt drift to provide developers clear visibility into model reliability.

Education

Noida Institute of Engineering and Technology (NIET) 2025 – 2029 (Expected)

Bachelor of Technology (B.Tech) in CSE (AI) | Greater Noida, Uttar Pradesh

City Montessori School (CMS), Lucknow

Class XII (Senior Secondary): **82.25%** | Class X (Secondary): **87%**
