Molishka Sahu

Full-Stack Web Developer
molishkasahu@gmail.com | Greater Noida, Uttar Pradesh

Professional Summary

Student at NIET Greater Noida focused on full-stack web development, with a project portfolio spanning customer-support applications, sandboxed code verification, and proposed LLM monitoring. Technical focus includes React, TypeScript, FastAPI, and PostgreSQL, with an interest in building practical web applications and reliable AI tooling.

Skills

Full-Stack Technologies: React, TypeScript, FastAPI, PostgreSQL

Application Features: Ticket management, role-based permissions, status tracking, conversations, activity history

Project Focus: Sandboxed code execution, automated testing, AI-code verification, LLM response evaluation

Projects

TriageDesk | React, TypeScript, FastAPI, PostgreSQL

- Developed a full-stack customer-support application by extending the open-source Full Stack FastAPI Template into a focused support-management tool.
- Built around ticket creation, priority-based organization, customer and support-agent permissions, and ticket status tracking.
- Includes ticket conversations and an activity history to keep support interactions and changes organized.
- Targets a deployed, browser-accessible demonstration of the end-to-end support workflow.

AgentGuard | Sandboxed Code Execution & Testing

- Designed a platform to provide agentic AI systems and coding assistants with an isolated environment for validating code changes.
- Acts as a verification layer between AI-generated code and production, supporting code execution, test runs, and failure identification before merge or deployment.
- Focuses on isolating validation workflows from the main application and its data to reduce exposure to unsafe or faulty changes.

NeuroTrace | LLM Monitoring & Evaluation | Proposed

- Proposed a monitoring and evaluation platform to identify and log potential hallucinations and other issues in large language model responses.
- Scope includes unsupported claims, inconsistent answers, and failures to follow instructions.
- Aims to give developers visibility into problematic AI responses and support investigation of model reliability.

Education

Noida Institute of Engineering and Technology (NIET)
